Coding & Solution

The application is developed using Python, Flask, and Machine Learning to predict loan approval based on applicant details. The project follows a modular structure with clean, reusable code, proper validation, and an interactive user interface to ensure accurate and efficient loan eligibility prediction.

Instructions:

1. Loan Approval Prediction System is developed using a modular and well-organized code structure with proper naming conventions and documentation.
2. Implement the complete loan approval prediction workflow, including user authentication, applicant data collection, machine learning prediction, and result generation.
3. Verify that all required project files, including source code, trained machine learning model, templates, static resources, dataset, and dependency files, are included and can be executed without errors.
4. Provide clear setup and execution instructions so that the evaluator can install the required dependencies, run the Flask application, and test the loan prediction functionality successfully.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/shaiksumaya1792/SMART-LENDER-PROJECT-NEW.git
Programming Language(s)	Python,HTML,CSS
Framework(s) Used	Flask,Scikit-learn

Key Features Implemented	Loan approval prediction, data preprocessing, input validation, prediction result display
Pending / Incomplete Features	User authentication, database integration , email notifications
Setup / Run Instructions	Install dependencies using pip install -r requirements.txt, then run python app.py and open the application in web

Code Quality Checklist

S.N o	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes

6	Code is committed to a version control repository	Yes
---	---	-----

Additional Notes / Comments:

Commented [SS1]: The Smart Lender project successfully integrates machine learning with a Flask web application to provide accurate loan approval predictions. The project follows a modular structure, making it easy to maintain and extend with additional features in future versions.
