Project Name	Smart Lender – Loan Approval Prediction System
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to illustrate how information moves through the system between users, processes, and data repositories. The diagram should clearly show the flow of data from input to output using standard DFD symbols

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents a user, organization, or external system that provides data to the system or receives information from it (e.g., Applicant, Admin, Bank).
Rectangle with numbered header	Process	Represents a function or operation that processes input data and generates meaningful output (e.g., User Registration, Loan Verification, Approval Prediction).
Rectangle (solid fill, no number)	Data Store	Represents a storage location where system data is saved and retrieved when required (e.g., Customer Database, Loan Records, Prediction Results).
Labeled arrow	Data Flow	Represents the movement of information between external entities, processes, and data stores. The arrow label indicates the type of data being transferred (e.g., User Details, Loan Request, Approval Status).

Example

The following diagram demonstrates how data flows through the Smart Lender – Loan Approval Prediction System, showing the interaction between users, system processes, and databases to generate loan approval decisions.
